

**1.What did you find? Which borough is the most expensive? Any other interesting trends?**

- Barnet is the most expensive borough and Hackney is the borough with the greatest price increase.

**2.How did you arrive at your conclusion?**

- The conclusions are derived from calculating the average, maximum, and minimum prices for each borough and visualizing the data.

**3. What were the main challenges you encountered? How did you overcome them? What could you not overcome?**

- -Challenges includes dealing with missing data, transforming the data into a tidy format, and interpreting the results.
- These can be overcome by using pandas' data cleaning functions and visualizing the results for better understanding.

**4.Is there anything you'd like to investigate deeper?**

- Further investigation could include analyzing the factors driving the price changes, such as economic indicators, development projects, and demographic changes.
